Ataimo Edem

Customer Success Engineer | API Management and Solutions
Architecture | Kubernetes and Cloud | Enterprise SaaS | Azure •
AWS • GCP

Ibeju Lekki, Lagos State, Nigeria

Summary

I help enterprise customers design, deploy, troubleshoot and evolve API platforms across complex cloud, Kubernetes and hybrid environments. As a Customer Success Engineer at Tyk, I work with enterprise customers across EMEA as a technical advisor across the full post-sales lifecycle — from solution design and onboarding through production troubleshooting, platform upgrades, architecture reviews, performance optimisation and long-term technical adoption. My core specialisation is API Management and enterprise integration. I work across API gateways, REST and GraphQL APIs, Kubernetes, cloud infrastructure, distributed systems, observability and API security, with hands-on experience across technologies including Azure, AWS, GCP, Redis, PostgreSQL, MongoDB, Kafka and OpenTelemetry. I also work extensively with authentication and API security patterns including OAuth 2.0, OpenID Connect, JWT and mTLS. A significant part of my role involves solving complex customer problems that span application, infrastructure and product boundaries. This includes reproducing technical issues, performing root-cause analysis, designing mitigation strategies and working closely with Product and Engineering teams to drive bugs, feature requests and product improvements through to resolution. Before moving into Customer Success Engineering, I worked across solution architecture, API Management consulting, cloud engineering and Microsoft Azure technical support. That background has given me a combination of hands-on engineering depth, architecture experience and customer-facing problem solving. My key areas of expertise include:

- API Management and API Architecture
- Solutions Architecture and Technical Consulting
- Enterprise Customer Success and Post-Sales Engineering
- Kubernetes and Cloud Infrastructure
- API Security, OAuth 2.0, OIDC, JWT and mTLS
- REST, GraphQL and OpenAPI
- Distributed Systems and High Availability
- Technical Troubleshooting and Root-Cause Analysis
- Platform Upgrades, Migration and Modernisation

Observability and Performance Engineering • Technical Workshops and Customer Enablement • Cross-functional collaboration with Product and Engineering I am particularly interested in customer-facing technical roles where I can combine hands-on engineering, solution architecture and customer advocacy to solve complex enterprise problems.

Experience

Tyk

4 years 11 months

Customer Success Engineer

July 2025 - Present (1 year 4 months)

Greater London

Own the technical success of enterprise customers across EMEA, acting as a trusted post-sales technical advisor for the architecture, deployment, operation and evolution of API Management platforms.

- Provide architecture and implementation guidance across enterprise API Management deployments running in Kubernetes, cloud, hybrid and on-premises environments.
- Lead technical workshops, architecture reviews, troubleshooting sessions, upgrade planning and migration discussions with customer engineering and platform teams.
- Troubleshoot complex L2/L3 issues spanning API gateways, Kubernetes, networking, distributed systems, databases, caching, messaging and customer infrastructure.
- Advise customers on high availability, multi-data-centre and hybrid deployment architectures, platform resilience, scalability and performance optimisation.
- Work across API security and identity patterns including OAuth 2.0, OpenID Connect, JWT, mTLS and certificate-based authentication.
- Support REST, GraphQL and OpenAPI-based API implementations alongside enterprise integration and API lifecycle requirements.

- Work hands-on across technologies including Kubernetes, Helm, Redis, PostgreSQL, MongoDB, Kafka, OpenTelemetry and cloud environments across Azure, AWS and GCP.
- Partner closely with Product and Engineering to reproduce product issues, perform root-cause analysis, raise and validate defects, contribute feature requests and drive complex customer escalations towards resolution.
- Translate customer requirements and operational challenges into practical technical solutions, deployment patterns and product recommendations.
- Help customers plan platform upgrades and migrations while assessing compatibility, configuration changes, infrastructure dependencies and production risk.
- Contribute customer feedback and recurring technical patterns back into Product and Engineering to improve product reliability and customer experience.

Customer Solutions Architect

December 2021 - July 2025 (3 years 8 months)

Greater London

Worked with enterprise customers to design and implement API Management solutions, translating business and technical requirements into practical architectures and deployment patterns.

- Led technical discovery and solution-design conversations covering API architecture, security, infrastructure and integration requirements.
- Advised customers on deployment architecture across Kubernetes, cloud and hybrid environments.
- Delivered technical workshops and solution guidance covering API Management, authentication, API security and platform integration.
- Supported customer onboarding, implementation and adoption while working across Customer Success, Support, Product and Engineering.

- Investigated complex technical issues and helped customers identify scalable and supportable implementation approaches.

Tek Experts

2 years 5 months

Azure Developer Support Engineer Stage 3

October 2021 - January 2022 (4 months)

Lagos State, Nigeria

Troubleshoot and Resolve escalations from Level 2 Engineers, mostly on the below products on the below:

- API Management Services
- Cloud Service (Classic Compute)
- Azure Resource Management
- Azure Blueprint
- Azure Light House
- Managed Apps
- Azure Policies
- Batch.

Train and Bring the new Stage 2 Engineers up to speed on the above technologies.

And I also built the following solutions for customers:

- On APIM Service, Virtual Network Integration, Azure AD Integration, Certification Authentication and developing of APIM Policies
- Developing ARM Templates, Blueprints, and Powershell Scripts and also consumed Azure Management APIs.
- Help customers troubleshoot application deployment issues on Cloud Service.
- Help customers on board their clients using Light House.

Azure Developer Support Engineer Stage 2

September 2019 - October 2021 (2 years 2 months)

Lagos State, Nigeria

Provided technical support for Microsoft Azure customers, investigating and resolving complex cloud infrastructure and platform issues.

- Diagnosed customer incidents across Azure services using structured troubleshooting and root-cause analysis.
- Worked directly with customers to understand technical issues, reproduce failures and implement sustainable resolutions.
- Investigated problems spanning cloud infrastructure, networking, configuration and application dependencies.
- Collaborated with internal engineering and escalation teams on complex or product-related incidents.
- Built strong foundations in cloud architecture, production troubleshooting, customer communication and incident ownership.

Klex Global Resources

Mobile and Web Developer

October 2018 - October 2019 (1 year 1 month)

Lagos, Nigeria.

Designed and developed mobile apps from scratch both the front-end UI/UX and the back-end logic of the app. Some of the mobile apps were developed using Flutter, while others, using Java (Android Native Platform)

- Mobile Application: <https://play.google.com/store/apps/details?id=com.postit.classified.postit>

Developed a web service, a RESTful API, to link up to the existing database, for app server communication and consumed it from an android app JSON Data format.

Published the android app on google play.

Designed and developed the web content of the company's site as well as its school portal

- School Portal: <https://www.school-point.com>
- Companies Website: <https://www.klexglobalresources.com>

Logic Gate Ventures

Application and Software Developer

March 2016 - December 2016 (10 months)

Minna

Below are the Task I completed and the applications I built:

- Designed web content of several informative and data-driven sites using HTML5, CSS, JavaScript.
- Developed databases of several sites using MySQL from the XAMMP control panel.
- Programmed several websites and link them to its database using PHP.
- Deployed an informative site on C Panel.
- Designed a GUI interface for a desktop application using scene builder to generate FXML layout structure.
- Designed the GUI interface using CSS.
- Developed a desktop application using JavaFX.
- Develop Simulations and Models Using AnyLogic Software.

Education

Federal University of Technology Minna

Bachelor's degree, Computer Engineering · (2012 - 2018)
